- Health: In watch industry it's estimated 6 -16 % absence to work linked to cervical problems.
- Health: Day and night headaches are very frequent and they are linked to the working position, constant visual-focus and light fatigue.
- Health: The longevity of workers are extremely reduced because of reduced vision or exhaustion.
- HR: The current working position is not attractive, specially for young generations.
- Production and teamwork: speed and efficiency of work while sharing a common micro-parts are highly penalized with the current "1 magnifier or microscope"
